

ALCONBURY ROBOTICS

FRC 11784

Sponsor Packet

Our Team

Our team is a **rookie FIRST Robotics Competition (FRC)** community team based in the RAF Alconbury army base. We have setup in Cambridgeshire in the **UK**, However we are based in RAF Alconbury (Unit 5609, APO, AE, USA). A **US Army base** with a division in Virginia.

We come from many successful **FIRST Tech Challenge (FTC)** teams within our region from many different organisations. Uniting into one team. We are the **only** active FRC team in our region and **one of 5** active FRC teams in the UK.

What is FRC?

Our team will be participating in the FIRST Robotics Competition (FRC), a high school-level program that challenges students to design and build a **150-pound robot** in just a few weeks. Students tackle a new game challenge each year. FRC offers **real-world experience** in engineering, programming, project management, and collaboration: equipping students with both technical and life skills.

This image is not from our team, it is an example of FRC from FIRST's website

FRC is ran by a non-profit/charity called **FIRST**. Who are dedicated to inspiring young people to explore STEM via hands-on **robotics challenges**, students of all ages design, build, and program robots while learning teamwork, creativity, and FIRST's core values of Gracious Professionalism and Coopertition. **FIRST empowers students** to become STEM ambassadors and leaders

Our impact so far:

20 team members

13 from FTC, 7 new to FIRST

2 mentors

But we are looking for more!

Across 5 FTC teams:

7 Awards won

All 5 teams attended the
European premier event

1,300+

impacted

Across all 5 teams

25+ outreach

events

Hosted and attended

90+

**interested in
FIRST events**

Helping teams internationally

Assisted and mentored teams from Jamaica, France, USA and more, we are planning to help out **many more** in FRC

Our plans

During FRC, we plan to continue our outreach and expand our reach. Aiming to **double our FTC outreach figures**. Your help can inspire many more children to take part in similar competitions and uncover their love for STEM

Supporting our team

Robotics is cool and all, however it is very expensive. If we want to be a successful team, we need many resources including, **materials, tools, apparel, robot parts, travel and even mentorship**, here are some examples of some costs we face:

The robot budget

As a team starting from scratch, robot costs will be very high. Thankfully, we have gotten help from other teams and FIRST to cover some of our components, however we still have a large cost to fill...

- **Robot** budget required (projected): ~**\$6000**
- **Tools and materials** budget required (projected): ~**\$2000**

But it's not just the robot...

- Registration fees: **\$6500**
 - Travel (projected, to Eindhoven): ~**\$8000**
 - Apparel and Pit (team merch, banners, work area): ~**\$1500**
 - Outreach (Donating kits + hosting events): **\$3000** (+ extra funding)
 - Miscellaneous (Other cumulative costs): **\$2000**
- Total cost (with robot): \$29000 (A huge amount!)**

In-kind donations:

Donations aren't always a lump sum of cash, **we appreciate in-kind donations**, and treat them the same as cash donations, based on **cost and impact** on our team or community

This could range from supplying materials and parts to fabricating metal or printing apparel

We need other things like:

- Mentors to help us succeed this season
- Machinery for fabricating parts
- 3D printing filament
- Materials (poly-carbonate, aluminium)
- Roller banners for events and our pit
- Team merch to give out and advertise
- Robot parts (like sensors and mechanical components)

Sponsorship tiers

Green tier \$100+

- Recognition on our socials
- Company on our website
- Small logo in our pit

Silver tier \$500+

All of stone tier benefits and...

- A small logo on our robot
- A small logo on our t-shirts
- Small logo at outreach events

Gold tier \$1000+

All of silver tier benefits and...

- A medium size logo on our robot
- A medium size logo on our t-shirts
- Large logo in our team pit

Titanium tier \$3000+

All of gold tier benefits and...

- Company name read out at competitions and outreach events
- Large company name and logo

Alconbury robotics has non-profit status that can be used for tax deductions

What's in it for you?

Our team is reliant on the kind donations of people like you!

With your help, we can achieve the following goals:

- Inspire the Future of STEM
- Create and run outreach events in our community
- Fundraise necessary parts for our robot such as motors
- Acquire needed materials, such as aluminum

To the left are our sponsor tiers, recognizing your help for our team

In-kind donations are treated the same as sponsorship, contact us for more details
